## CHECKLIST OF THE LEPIDOPTERA OF TURKEY <sup>1</sup>

by

Ahmet Ömer Koçak<sup>2</sup> Muhabbet Kemal<sup>3</sup>

**Abstract:** Checklist of the Lepidoptera of Turkey. *Cent. Ent. Stud., Priamus Suppl.* 1: 1-196.

This publication deals with the Lepidoptera species hitherto recorded in Turkey. Totally 5029 species are listed under 76 families. Synonyms, Turkish vernacular names, and provincial distributions in Turkey are mentioned. Some remarks on the nomenclature of genus group taxa are also given.

**Keywords:** Checklist, nomenclature, Lepidoptera, Turkey.

## Introduction

Within the frame of the database of the Old World Lepidoptera<sup>4</sup>, the authors have been preparing the checklists of various states, regions and territories, where the Lepidoptera species and subspecies recorded. In the last seven years, nearly 47500 species of Lepidoptera, 21000 subspecies in 7100 genera among the 913 family group taxa have been checked up independently, concerning their validity in accordance with the ICZN. Besides, their synonyms, and worldwide distributions of the taxa also gathered, by using the special codes indicating nearly 5400 localities of the Lepidoptera in the World. These codes are freely accessible in the following internet address:

<http://www.members.tripod.com/Cesa88/CODE.doc>

In the present paper, the Lepidoptera species recorded in Turkey so far, are listed alphabetically within their families. Totally 5029 species, belonging 76 families are listed below. The species of the butterflies are arranged under the Part I. In this part, totally 387 species are listed under 9 families. Similarly, the species of the moths are arranged under the Part II. In this part, totally 4642 species of the moths, belonging to 67 families, are listed alphabetically.

Each species are given with valid scientific names, authors and date of publications. Synonymous scientific names are added to each taxa in grey colour. Vernacular names in Turkish are given in green colour, if present. Finally, national codes of Turkish provinces are mentioned in orange colour. Some species were listed here without citing the provincial distribution, as they were mentioned in the literature only known in "Turkey".

Nomenclaturally unavailable name is indicated by the mark #.

Provincial distributions of the species are based upon the literary data and the collection of the Cesa. Faunal information of the latter source will be published separately.

Bibliography of the Lepidoptera are still under preparation as separate file of the Cesa Databank. However, a list of the publications used during the preparation of this checklist are given at the end of this paper separately (vide p.183).

The provincial distributions of the Lepidoptera in Turkey are mostly little known. The numerical information among the best known five provinces are given below:

| Provinces          | number of species |
|--------------------|-------------------|
| Amasya (05)        | 1413              |
| Kahramanmaraş (46) | 1380              |
| Ankara (06)        | 1372              |
| Bursa (16)         | 1297              |
| Konya (42)         | 1211              |

On the other hand, the number of the recorded species is less than 100 among more than ten provinces in various regions of Turkey.

Faunal researches organised by the authors are still continuing.
